High-Impact Tutoring (HIT) has emerged as a promising practice to address pandemic-related unfinished learning. As schools nationwide seek to implement HIT, the abundance of information available may make launching and scaling this strategy daunting for educators. Leading a HIT Community of Practice throughout the 2021-2022 school year, TNTP developed the implementation framework below as a succinct model for schools to consider as they explore launching and scaling their own programs. As nomenclature can vary across references, this resource provides specific references to additional resources and information available to further explore these necessary concepts for the effective implementation and scaling of HIT programs. While each of the nine key elements below has a specific focus, content overlaps to ensure coherence when designing a HIT program. Notwithstanding, references noted within each domain are not duplicated. For example, while the Community Engagement and Sustainability domain includes the tutor pipeline development, references for the tutor pipeline are solely included in the Tutor Pipeline Development domain. Thus, linking references to the larger domain concept facilitates searching for information to further explore any of the domains noted within the implementation framework.

<tr>
<td>School systems define the short- and long-term goals of high dosage tutoring and how it aligns with their broader vision and strategic plan. Critical for this component is thinking through how high-impact tutoring fits into a coherent vision for the student experience.</td>
<td>School systems establish criteria to determine which students will get access to high-impact tutoring. These decisions are then used to inform other decisions, such as the composition of the tutor pipeline. This component also includes thinking through how programs will scale to reach more students over time.</td>
<td>In this component, school systems inventory and assess community resources—including tutor pipeline development opportunities—and perceptions of tutoring. This component also involves ongoing work to engage communities in the future of high-impact tutoring initiatives and how school system resources are used to sustain them.</td>

<td>------------------------------</td>
</tr>
<tr>
<td>Whether tutoring takes place in school or at other community organizations, school systems must build a strong relationship with the site and prepare a site leader to successfully manage tutoring efforts and communicate with stakeholders.</td>
<td>Managing an effective high-impact tutoring initiative is a team effort, and there are specific roles—such as data management, tutor development, and tutoring content—that need dedicated planning. School systems should define how necessary roles will be fulfilled and how the team will coordinate with broader district efforts.</td>
<td>School systems develop a plan for regular program improvement that involves assessing reach, satisfaction, and impact. This includes collecting and maintaining high-quality data on tutoring sessions and a process for how this data will inform decision making and program improvement.</td>
